## Education

|                                                                        |                  |
|------------------------------------------------------------------------|------------------|
| <b>Savitribai Phule Pune University, Pune</b>   Post Graduation        | <b>May 2025</b>  |
| Masters in Computer Applications (MCA)                                 |                  |
| <b>D. Y. Patil International University, Akurdi, Pune</b>   Graduation | <b>June 2023</b> |
| Bachelors in Computer Applications (BCA)                               |                  |

## Experience

|                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      |                            |
|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------------------|
| <b>Inorbvict Healthcare India Private Limited, Hinjewadi, Pune</b>   Data Science Intern                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             | <b>Aug 2024 – Oct 2024</b> |
| <ul style="list-style-type: none"><li>Automated web scraping using Python to extract, clean, and export structured data for analysis.</li><li>Performed functional and usability testing for chatbots and CRM systems; tracked issues via Jira in Agile sprints.</li><li>Built and deployed a 100+ page business website on Wix, using user analytics to enhance design and UX.</li><li>Trained and tested AI chatbots for customer interaction, improving accuracy and user experience.</li><li>Developed interactive AI-based training modules and technical documentation to support employee learning.</li></ul> |                            |

## Skills

- Backend: Python, PHP
- Frontend: HTML, CSS, JavaScript, Tailwind CSS, React.js, TypeScript, Figma
- Database: MySQL, (AWS) Aurora, MongoDB, (AWS) DynamoDB
- DevOps: Git, GitHub, Linux, Bash, Shell Scripting, Docker
- Software Development: Software Development Life Cycle (SDLC), Agile Methodology, Jira, Scrum
- Cloud Technology: Amazon Web Service - EC2 Instances, RDS, IAM, Auto Scaling, ELB, VPC, S3, EBS, EFS, NAT Gateway, Route table, Security Groups, Elastic Ips, CloudWatch.

## Projects

|                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        |                              |
|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|------------------------------|
| <b>3-Tier Web Application on AWS</b>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   | <b>Mar 2025 – April 2025</b> |
| <ul style="list-style-type: none"><li>Designed and implemented a production-grade three-tier architecture using Amazon EC2, Elastic Load Balancer (ELB), and Amazon Aurora (MySQL-compatible).</li><li>Hosted the React frontend on EC2 instances in a public subnet, with Nginx as a reverse proxy for optimized traffic handling.</li><li>Configured AWS Networking components: VPC, Security Groups, Route Tables, Internet Gateway, and NAT Gateway to ensure secure and efficient access control.</li><li>Used Amazon Aurora DB with a Read Replica setup across multiple Availability Zones for fault tolerance and high availability.</li></ul> |                              |
| <b>AI Pose Estimation and Gym Tracker</b>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              | <b>Nov 2024 – Dec 2024</b>   |
| <ul style="list-style-type: none"><li>Real-Time Pose Estimation: Utilized Media Pipe to capture and analyze human postures through live video feed. Implemented smooth scrolling and interactive elements to enhance user engagement and navigation.</li><li>Exercise Tracking: Enabled tracking of specific exercises (e.g., bicep curls) with detailed statistics such as repetition count, form score, and calorie estimation.</li><li>Interactive Web Application: Built using Flask to render real-time video feed and allow user interaction, such as starting/stopping tracking and setting fitness goals.</li></ul>                            |                              |

## Certification

- AWS Educate Introduction to Cloud 101
- AWS Educate Getting Started with Storage
- AWS Knowledge: Cloud Essentials
- Docker Foundations Professional Certificate by LinkedIn Learning.
